A fibrous product with a body shampoo is obtained by a method in
 which an aqueous printing paste composed of a detergent for body
 shampoo, e.g., lauryl ether sodium sulfate, etc., a glue such as CMC,
 sodium alginate, etc., and a volatile alcohol such as ethyl alcohol,
 together with a perfume, a pigment, etc., as needed, is printed in a
 pattern on the surface of a fibrous product, e.g., woven or nonwoven
 or knitted fabrics of natural or synthetic fibres, etc., and dried.

The aqueous printing paste is composed of e.g. 300 pts.wt. 20%
 lauryl ether sodium sulfate, 100 pts.wt. 4% P.O.E. ethyl ether (17
 moles EO added), 500 pts.wt. 7% CMC, 90 pts.wt. water, and 10
 pts.wt. ethyl alcohol.

USE/ADVANTAGE - The fibrous product containing body
 shampoo is excellent in appearance and texture and can effectively
 and simply wash human body only by wetting it with water. (3pp
